NIMANTRAN · PRODUCT SUBMISSION · 30 OCTOBER 2026

Nimantran — Product job specification

Product

Nimantran is an adults-only platform for discovering and hosting interest-led social gatherings across Delhi NCR. Its personality is contemporary, desi and Bollywood-inspired, with a simple choice between finding a gathering and hosting one.

Job to be done

When I want to meet people or make plans, help me find a nearby gathering that fits my interests, budget and comfort level, understand what is included, introduce myself to the host and receive clear confirmation before attending.

For hosts: help me describe a gathering, communicate its inclusions and rules, review introductions, approve guests within capacity and manage attendance.

Intended users

- Adults aged 18 and over who want new social experiences, including solo attendees and people new to the city.
- Independent organisers, activity hosts and venue operators bringing people together around shared interests.

Core experience

1. Browse by category, city, date, budget, age eligibility, atmosphere and sober/solo-friendly preferences.
2. Read the event description, price, inclusions, house rules and host information.
3. Sign in with Google, complete an adult profile and send an introduction with a join request.
4. The host reviews the request and approves or declines it. Free-event approval produces a confirmed booking.
5. The guest receives a category-themed invitation and access to the private venue details.
6. The host checks in the guest; after the event ends, checked-in attendees may review it.

Design and engineering requirements

Use a responsive, accessible interface with illustrated category collections, readable event information, simple forms, useful error/empty states and a list/map discovery toggle. Hosting uses one event date and start/end times in IST, including overnight end times. Store shared records in Supabase PostgreSQL and enforce ownership, capacity and private-address access in the backend.

Scope boundary

This release supports the free-event journey after Supabase setup. Paid checkout, host payouts and the proposed referral credits are not active. Do not describe a pending request as a confirmed ticket, invent attendance/reviews, or present illustrative events as real listings.

Acceptance criteria

A host can publish a valid event; a separate adult account can request a place; only that host can approve; confirmed bookings respect capacity; only authorised users can access private addresses; confirmed guests can download their invitations; only checked-in attendees can review after the event ends.

Current verification status

The latest code has passed 73 unit tests, type checks, static/full builds, and browser HTTP-fixture journeys including Google OAuth and host/guest booking flows. Database access checks passed during implementation. These are local checks, not a claim that a real hosted Google login or cross-device booking has passed. The owner last reported the Supabase project as paused; it must be resumed and the hosted flow verified for reviewer access. Checkpoint approval is determined by the submission platform, not by this document.

Nimantran — Feature list

Attendee experience

- Separate Find your scene and Host a gathering entry points.
- Six illustrated categories: Naach Meri Jaan, Khel Khel Mein, Daawat Hai!, Rang Jamao, Chalo Niklein and Hello Ji!.
- Search by event text, neighbourhood and host name.
- Filters for category, city, date, budget, age eligibility, atmosphere, language, daytime/evening, sober preference, solo-friendliness, available places and host rating.
- Today, this weekend and next-seven-days shortcuts.
- Sorting by upcoming date, lowest price, confirmed attendance or host rating.
- List/map switch with approximate event pins and map attribution.
- Event descriptions, inclusions, extra costs, rules, cancellation terms and host history/reviews.
- Google sign-in, adult profile and private birth date.
- Personal introduction and host approval before confirmation.
- Saved events and personal booking status dashboard.
- Confirmed category-themed invitation, SVG download and print/PDF support.
- Private exact venue details for confirmed guests.
- Booking cancellation and issue-report submission.
- Attendance-backed reviews after an event ends.

Host experience

- Three-part form: the idea, the details and the welcome.
- One event date with start/end times in IST; earlier end times finish the next morning.
- Category, atmosphere, adult age range, capacity, price and solo-friendly/sober settings.
- Explicit food, drink and other inclusions, extra costs, accessibility and house rules.
- Private venue address plus a public approximate neighbourhood pin.
- Browser-tab draft preservation and editable defaults.
- Published-event dashboard and guest introductions for review.
- Approval/decline actions, capacity enforcement and attendee check-in codes.
- Descriptive edits before active guest requests, with stale-edit protection.
- Event cancellation and replies to attendee reviews.

Trust, data and presentation

- Shared Supabase persistence and database-enforced permissions.
- Private dates of birth, venue details and booking codes.
- Guest counts and host reviews based on stored records.
- Adults-only accounts; additional event age rules apply. Age is self-declared, not independently verified.
- Responsive desktop/mobile design, accessible controls and reduced-motion support.
- Original AI-generated Bollywood-style category illustrations, used as artwork rather than proof of actual performers or customer activity.

- Production discovery contains only published host records; no fictional inventory or attendance counters.

Pending / unavailable

- Paid checkout, refunds and host payouts: not active.
- Proposed referral benefit of ₹250 each: not active; no credit has been issued.
- Chat, automatic messaging, paid boosts and subscriptions: outside this MVP.
- Reports are stored for operator review; a staffed moderation/support operation still needs to be established.
- Hosted Google login and real cross-device acceptance remain to be verified after the Supabase project is resumed and the social migration is installed.

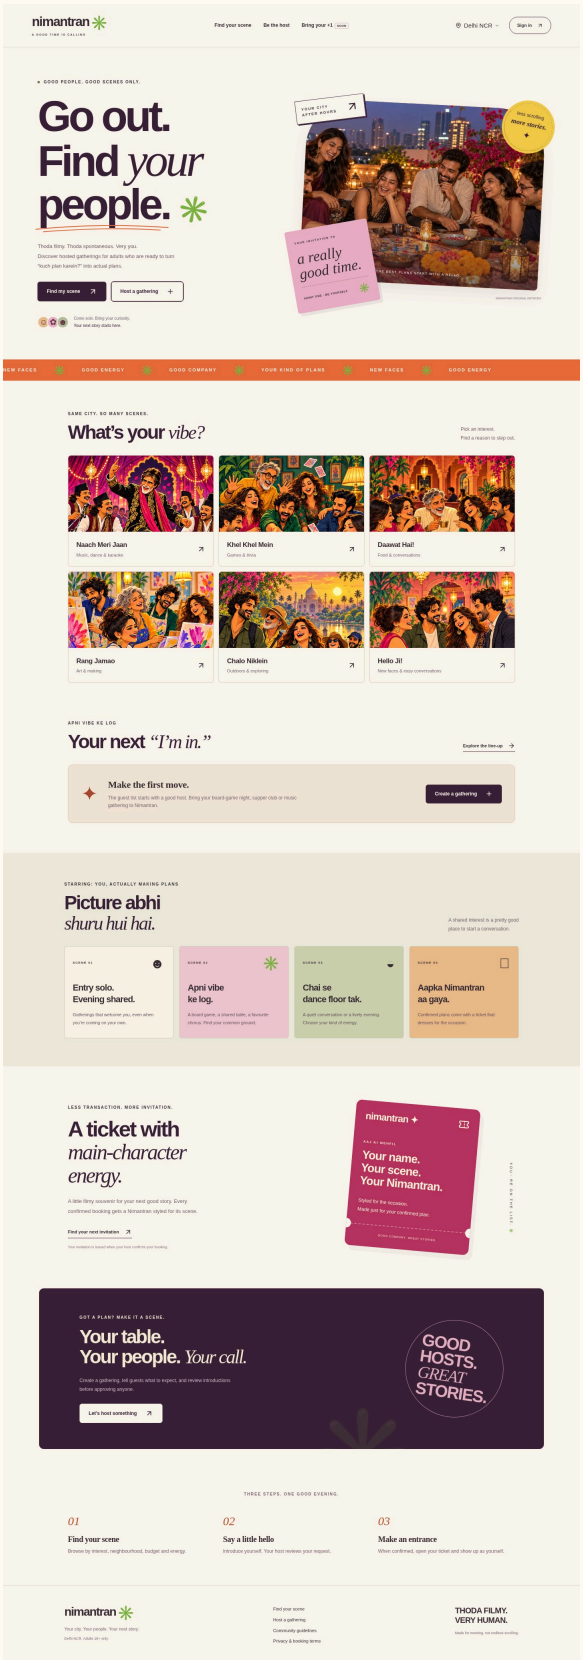

Screens included

1. Desktop homepage — complete current landing page.
2. Category artwork — six current illustrated category cards.
3. Mobile homepage — current responsive layout.
4. Discovery filters — real discovery UI with an empty catalogue, not staged live events.
5. Host: the idea — current event-creation interface.
6. Host: date and times — one date and two time inputs.
7. Host: inclusions — food/drink fields and additional rules.

All seven images are captures of the actual local production build. They do not show real customer activity or establish that the hosted backend is operational.
